

This diagram shows how my database is organized. So, I used **five tables** by follow assignment required that I must use five table.

- Shows table the main details of each movie or TV show.
- Platform table the name of streaming platform, means one platform can have many shows.
- Genre table is type of shows like Action, Comedy or drama

- Actor table is name of the actors.
- ShowGenre is middle table that links Show and Genre because one show can have many genres.
